62-14499

I. Wittes, J. L.

62-14499

Trans. of Glascotechnische Berichte (West Germany) 1956, v. 29, no. 4, p. 131-137.

DESCRIPTORS: *Glass, Sensitivity, *Climatic factors, Test methods.

Sheet glass is decomposed by moisture only in its packing, either by wet rain or when stored in moist rooms. Two types of decomposition appear as dullings, which show, however, the same technical course and produce the same typical defect, the so-called dulling, which is absence of reflection by chemical changes in the top layer. The testing method described here requires only a few minutes. In contrast to all other methods, the defect (Materials + Ceramics, TT, v. 8, no. 1) (over)
